Participant Consent Form: Website Builder Evaluation

The aim of this study is to evaluate an early prototype of a website builder for rental properties. The structure of this project differs significantly from existing website builder applications, so it is important to understand whether the core design decisions are appropriate for the target use cases.

This evaluation will consist of two stages. The first will be an evaluation task where you will be asked to interact with the prototype. This stage should take no longer than an hour. Any data you input into the prototype during this task will be stored securely in a database available locally on a password protected computer account. This data will be visible to the project lead and may be used throughout the project and final dissertation.

The second stage will consist of an interview that should take no longer than an hour. During this interview you will be asked about your experiences with and opinions on the prototype. The audio from this interview will be recorded. The anonymous audio recordings will be held securely within a password protected computer account. No personal participant information will be stored with the data. The recordings will be used by the project lead throughout the project and anonymised transcripts may be used in the final dissertation.

Please note that you may withdraw from this evaluation at any time without prejudice, and any data already recorded will be discarded. Otherwise, all data will be destroyed after the duration of this project.

If you have any further questions regarding this interview, please contact:
